

MajID Razmi Khanghah

Bio :

As an experienced industrial designer with strong foundation in design principles, aesthetics and technical skills, I'm confident in my ability to be an effective asset to your team and a contributor to your success.

During my 18 years of professional experience as an industrial designer, I have successfully worked with more than 40 companies (hired position and freelancing) on various branches of design such as product design, package design, furniture design, transportation design & etc. I am also proficient in manufacturing techniques, material and CMF knowledge and have experience working with different materials such as concrete products as a highlight.

My expertise in design is inspired by nature, by using its various elements and organizing them in the "golden ratio" format and paying attention to the cultural consciousness, I'm able to implement spirituality and timelessness to my designs.

For ideation and creative development process, I use methods such as "brain storming", "TRIZ", "deconstruction" and other development techniques to ensure the best result for the finished product.

My greatest career highlights has been collaborating with "Porsche design" as well as being awarded and recognized by the international design community such as "Red dot", "DNA Paris", "European Awards" and "IDA" which have illuminated my career

Italfit (2020)

Position: Freelance industrial designer

I was tasked to design an EMS training device with unique aesthetics as a priority. This product was successfully designed by being a stand out among similar devices made by the competition, my attention to detail and the aesthetic appeal of the product brought market attention to the Brand's other devices and the company has seen approximately 40 percent in profits since.

Porsche Design Turkey (2013- 2014)

Position: Freelance industrial designer

My contact with Mr. Mitja Borket resulted in my collaboration with Porsche design Turkey on various projects such as design and development of an elevator cabin and 2 sets of unique furniture.

During these projects, I was responsible for Ideation, sketching and 3D modelling of the mentioned products while being in constant contact with the company for technical info and knowhow.

Heera Design inc. (2010- 2011)

Position: senior designer.

During my career at Heera design inc, I successfully worked with dozens of companies focusing on POSM, Packaging and product design such as "Saharkhiz saffron company", "Bahraman saffron co.", "Otto hatt", "Owner Korea stationary products." and "Canco Canada stationary products".

Bahraman Saffron co.

I successfully designed the packaging of various saffron containers, inspired by the traditional "Tazhib" patterns. Designing the containers included the process of brain storming, ideation, 3D development, prototyping and manufacturing quality control, as for the regular paper packages, the design process was made with regular meetings and coordination with the graphic design team.

I was also responsible for the design of the company's booth at the "agro food" fair which won an award for the best booth design of that year, the design process was done in span of 2 weeks and was a result of onsite collaborating with the contracting production team which increased the annual turnover of the customer and made them a prominent local saffron distribution company.
